

Current Draw and Thermal Dissipation IPD Series: Intelligent Power Drive Amplifiers

IPD 2400

The following tables contain information on measured current consumption as well as calculated heat dissipation during what we see as the most extreme sustained normal operation (1/8 rated power).

IPD 2400							
Level	Load	Rated power	Mains voltage	Line current	Watt *1)		Thermal Dissipation
			VAC	IAC *2)	In	Out	Dissipated

*1) The amplifier's PSU operates as a non-resistive load, so the calculation "Volts x Amps = Watts" would not be correct. Instead, measured and specified here is what is known as the "Active Power" in the amplifier providing useful, real-world values of power consumption and heat dissipation.

*2) Current draw figures measured at 230 V. as well as 120 V. The efficiency is similar, but not identical for the two scenarios. The efficiency for 100 V mains is very similar to that of 120 V.
